

Nano Ontario Conference and Workshop 2011 – Putting Nanotechnology to Work

October 14 & 15, 2011

McMaster University

The organizers of the 2011 Nano Ontario Conference and Workshop invite Ontario-based academic, industrial and governmental researchers to present their latest achievements in nano-science and nanotechnology. We also invite inventors, entrepreneurs and business leaders to explore the unique opportunity provided by our interdisciplinary forum for technical due diligence and potential commercialization of emerging new technologies. The meeting will be held on the main campus of McMaster University, Hamilton, ON and will serve as a platform for the open exchange of ideas, the development of new collaborative projects, and the initiation of new industry-academia partnerships.

Highlights of the conference:

- Keynote presentations from internationally recognized academic and industrial experts
- Industrial panel on the impact of nanotechnology on our economy
- Official launch of Nano Ontario
- Extensive interactive poster sessions
- Company exhibits

The program will be devoted to collaborative research supported by government, academia and industry – in line with newly formed Nano Ontario's focus on working together to raise the profile, increase research, build investment and drive economic returns from nanotechnology in Ontario and across Canada.

The deadline for abstract submission is August 31, 2011. "Early Bird" registration is available until September 15, 2011.

More detailed information about the venue, registration, accommodation, and the submission of abstracts can be found at www.nanoontario.ca/index.php?page=nanoontario2011.
